

Are your applications fit for your business?

HP's Application Fitness and Value Assessment

Indicators you may need an Application Fitness and Value Assessment

1. Is the quality of service delivered by your application portfolio deteriorating?
2. Is the effort and cost to accommodate business changes unacceptable?
3. Is the spend on maintenance and support increasing and unsustainable?
4. Is the complexity and associated business risk unacceptable to the stakeholders?

The degree of business alignment and application quality deteriorates over time. This may be as a result of change in business requirements, past additions and changes, or unsupported technology platforms. The result is often an increase in business risk, cost, and stakeholder dissatisfaction.

The HP Application Fitness and Value Assessment provides an independent, fast, and cost-effective application assessment and road-map to:

- Improve business and IT alignment
- Reduce business risk from aging applications and technology platforms
- Enable targeted reduction in application maintenance and support costs
- Drive greater efficiency and transparency in how available IT capital budgets are utilised.

Why use the HP Advisory Service?

You have IT architects and business analysts so why use the HP Advisory Service?

Experienced HP Experts: HP provides independent and experienced experts to plan and run the engagement.

Proven Methodology: HP leverages a mature and proven framework, from which automated heat-maps and charts are produced to support iterative assessment, visualisation, and investment decision making.

Business/IT Alignment: HP's experts are adept at translating technology into business outcomes.

Flexibility: HP's Advisory Service can be tailored to meet your specific requirements.

Faster ROI: Our clients find that our service pays for itself!

Transpower and HP

"I would rate Manhor as one of the best strategic consultants that I have come across in breaking down and articulating difficult technical concepts in ways that both less technical and non-technical teams can understand. His obvious use of frameworks for solving problems has been first class"

Jim Tocher
CIO

Transpower

Concerned about the upgrade path for a number of key applications, Transpower engaged one of HP's expert transformation consultants, Manhor Singh to conduct an Application Fitness and Value Assessment.

During this assessment, Manhor, who leads HP's Application Fitness and Value Assessment team, worked with various elements in the Transpower team to develop a comprehensive upgrade strategy. Supported by this collaborative process, HP consultants utilised advanced frameworks and careful analysis to develop a detailed road-map outlining the architecture needed to reach the desired state.

Transpower noted that throughout the assessment, HP's approach, diplomacy, and collaborative skills proved invaluable in tackling and simplifying difficult problems and uniting members of the team behind a vision for Transpower's future.
