

Maximise your virtualisation efficiency

HP Virtualisation Health Check

Virtualisation - today's reality

Virtualisation is a reality of IT today and should offer enhanced operational productivity, cost efficiency, and a greater return on IT investment. It is implemented by businesses to address the challenges of under-utilised IT environments and data centre sprawl.

Despite significant investment, many businesses are failing to take full advantage of their virtualised environments, often due to inadvertently operating outside of best practice. These environments may still be characterised by poor workflow, under-utilised servers, poor system and application performance, uncertain security, and unnecessary technical complexity, many of the problems virtualisation is supposed to solve.

Why use HP's Virtualisation Service?

With HP's Virtualisation Health Check, you'll receive accurate, timely analysis of your environment and its performance. Using industry-leading HP tools and processes, a highly skilled and experienced Virtualisation Consultant will work with you to understand your virtualised environment and evaluate its current health and architecture against HP best practice.

At the conclusion of the assessment process, our consultant will provide you with actionable recommendations to further optimise the configuration of your environment, including direction to improve its performance, manageability, security resiliency and scalability.

Addressing the common issues of virtualised environments with HP

Discovery & audit

HP's Virtualisation Health Check provides a summary of your virtualised environment. We evaluate your hosts, guests and groupings, and the processes that manage virtual machine deployment and retirement.

Security considerations

We conduct a summary review of the security artefacts and policies on both your physical infrastructure and guest virtual machines.

Host capacity planning & configuration management

HP's Virtualisation Health Check provides a summary of both the current performance of the physical hosts and the guest virtual machines, and a summary review of the configuration management policies in your virtualised environment.

Let HP help you optimise your infrastructure investment

With HP, you'll become aware of any untapped opportunities of your virtualised environment, so you can maximise your return on investment.
